

## ABOUT ARBA RETAIL SYSTEMS

ARBA Retail Systems is a leading provider of Point of Sale (POS), inventory control, and cashless payment solutions for the retail, corporate, healthcare, government, and education industries. Our end-to-end system is used by onsite cafeterias, retail stores, and sundry shops to enhance employee convenience, increase retail revenue and profits, manage menus, and improve operations efficiencies.

Our cloud based POS and mobile versions offer greater efficiencies and additional revenue generating opportunities.

## A Comprehensive Suite of POS and Enterprise Solutions

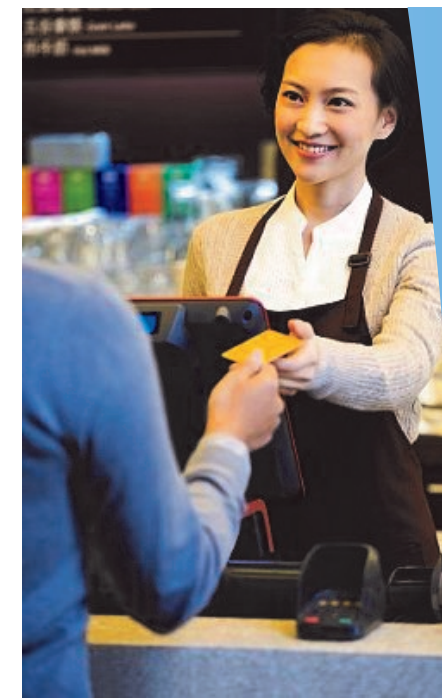

# A Game-Changing POS Platform

## THE FLEXIBILITY AND SCALABILITY TO GROW WITH YOUR ORGANIZATION

The ARBA POS system is a complete Point of Sale (POS) solution for retail and food service environments which quickly processes transactions in a high-volume environment. Built on Microsoft's .NET SQL Solutions Framework, the ARBA POS system is compatible with Windows 7, 8, and 8.1; is tablet, mobility, and cloud ready; and provides maximum sustainability and adaptability.

Our game-changing POS Solutions address three key customer requirements: a product that can be leveraged as "software as a service" in the cloud as well as on premises, a product that can be configured and customized to our customers' specific needs, and a full services portfolio that addresses turn-key deployment, client support (including help desk and ongoing product releases), and training.

- CLOUD DEPLOYMENT OPTIONS

## flexible solutions for your business needs

### MAXIMIZE YOUR POS EXPERIENCE TO INCREASE SALES AND PROFITABILITY

#### PAYROLL DEDUCTION

The ARBA POS system's Payroll Deduction module enables employees to pay for purchases with the badge that they already carry. ARBA Retail System clients who have implemented Payroll Deduction have seen an increase of 25-60% in sales within the first year.

- Allows employees to make cashless purchases
- Supports department billing for department purchases
- Interfaces with financial system for end-to-end automation
- Tightens financial control
- Enhances employee productivity
- Increases cafeteria and store revenue and traffic

#### PURCHASING AND RECEIVING

The ARBA POS system supports purchasing and receiving via vendor invoices or ARBAPRO generated purchase orders to make tracking your inventory a seamless process. Recommended orders can easily be generated for commonly ordered items, like candy and snacks, to make receiving even faster.

#### MENU SCHEDULING AND ROTATION

For food services, the ARBA POS system supports menu scheduling and menu rotation pre-programmed up to 52 weeks, which enables the register screen to easily cycle between up to 4 meal periods per day and allows for an unlimited number of different menus.

ARBA Retail System personnel work with you to design and tailor your original menu screens, and then train you to make menu changes and price changes, eliminating the need for service calls to make changes.

#### REGISTER CONTROL

The ARBA POS system allows you to control what is done on the register. You can decide whether discounts, voids, refunds, and many other functions are allowed and who can perform these tasks.

#### SERVICES

ARBA Retail Systems offers 24/7 support 365 days of the year, as well as comprehensive training, including initial onsite training, follow-up online training, and Webinars on popular topics. ARBA Retail Systems also works with you during the Deployment process, offering Deployment Planning to ensure that your transition to the ARBA POS system goes smoothly.

### REPORTING

The ARBA POS system provides you with an extensive selection of reports with the data to enable you to make fully informed purchasing decisions and improve your operational efficiency.

#### SALES BY ITEM, BY HOUR, BY 1/4 HOUR, BY MEAL PERIOD REPORTS

Food services can track exactly how many of each item sells on each day and at each time to take the guess work out of production planning, which enables your customers to purchase the food and beverages that they want when they want them. Monitor Grab-and-Go items as well, so that your coolers and shelves are always stocked with the optimal mix of items to satisfy your customers.

#### INVENTORY ANALYSIS & PHYSICAL INVENTORY

Use Inventory Analysis reports to gain a full understanding of the value of your inventory, and then conduct Physical Inventory manually, with a scanner, or with the assistance of an ARBAPRO trainer on site to keep an accurate count of your inventory.

#### SALES ACTIVITY & FINANCIAL REPORTS

Pinpoint the profitability of individual items to determine each item's sales contribution, ensuring that you make truly informed decisions on what to purchase. View historic sales data by item and department to determine buying trends in your store or cafeteria.

#### REGISTER REPORTS

X/Z reports and media reports by cashier, register, register group, and store provide totals for gross sales, total sales, discounts, tenders, voids, No Sales, and returns.
